

Axel Nova Ventures

PRODUCT PROPOSAL, VERSION 2

TUITION CENTRE MANAGEMENT PLATFORM

One platform. Online, and built to grow.

Close the gate on free riders, collect every fee on time, and give 700 parents one place that answers their questions. Purpose-built for a Malaysian tuition centre teaching fully online.

700+

students, 100 tutors

3

phases, three ways to own it

RM 2

per student, founding rate

PREPARED FOR

Pusat Tuisyen Hz Academy

Trusted since 2014 · transitioning to a fully online centre

Founding Design Partner No.1

August 2026 · axelnova.tech

Four problems, and what it costs to solve them

HZ already teaches over 700 students online with around 100 tutors. The brand works and the students arrive. What is missing is control: who gets into class, who has paid, and what parents actually know.

THE NUMBER THAT MATTERS MOST	IF FREE RIDERS ARE	THAT IS A YEAR
Class links live in WhatsApp groups Anyone in the group, or anyone forwarded the message, can attend. Today there is no way to know how many do, which is the real problem. Nobody can manage what nobody can measure.	2% of students	RM 40,320
	5% of students	RM 100,800
	At 700 students and roughly RM 240 a month. The platform costs a fraction of the lower row.	

What HZ asked for, and where each one lands

THE REQUIREMENT	PHASE
1 Stop free riders. Join links issued per student in the portal, never in a group chat, and only for accounts that have paid	Phase 2
2 Parents know what class and when. Schedule, announcements and class information in one place, pushed by WhatsApp. Quizzes later	Phase 2, quizzes after
3 Monthly payment that collects itself. Direct debit, automatic reminders, every ringgit recorded against a student	Phase 2
4 Suspend access when unpaid. Falls out of one and three with no extra machinery	Phase 2

Phase 1 first, deliberately

Phase 1 is the website and campaign system, at **RM 6,000 to 8,000**. It is small, it ships in weeks, and it lets HZ see how we work before committing to the build that matters. If the free riders are the more urgent pain, say so and we will bring phase 2 forward.

What it costs to run

Subscription at **RM 2.00 per active student a month**, which is about **RM 1,400** at HZ's current size, against a published rate of RM 3.50. Or buy the build outright. Three routes, set out in full further on.

Going online changes the product, not just the classroom

Four things changed after our July conversation. Everything in this proposal follows from them.

Fully online, no physical classes

Branches stop being the organising idea. In their place the system uses **cohorts**, a class group taught together online, and the registration form drops from six steps to five. **The objection a parent raises changes too.** Not "how far is it", but: is the class live or recorded, what if my child misses one, how do I know they attended, what device do they need, and can I cancel. Those five questions now shape the website and every campaign page.

Zoom is the classroom, and we integrate it rather than rebuild it

We will never build video conferencing. We build everything around it: the join link, the recording, session materials, and most importantly the **join log**. When a class ends, Zoom already knows who joined and how long the tutor taught. That single fact removes a whole category of manual work.

The centre is bigger than the old plan assumed

Over **700 students** and around **100 tutors**. That is not a rounding change. It moves Hz into the LHDN e-Invoice mandate, it makes Zoom licensing a real monthly cost, and it means every manual process, chasing payment, answering parents, checking who turned up, is repeated seven hundred times a month. At that size, the difference between a system and a spreadsheet stops being convenience and becomes money.

Five phases became three

The old plan built the office system first and left parents until last. That order suited a centre with a physical front desk. Now the website comes first, the parent portal and payments come second, and the tutor portal becomes an add-on because Zoom already supplies the hours it was needed for.

What this means commercially

A physical centre has a natural catchment. An online centre has none of that, and no ceiling either. That trade is why this proposal starts with the website: it is not a nicer brochure, it is the mechanism that replaces the shopfront.

Worth saying plainly

Fully online tuition competes with free video content and with direct-to-parent tutoring apps, and it churns faster than a physical centre. A hard cutover also risks the existing local families who chose Hz partly because it was nearby. We think the reach is worth it, but we would rather name the risk than discover it together later.

SECTION 2

Four surfaces, one set of numbers

Everyone at Hz sees a different view of the same data. Nothing is entered twice.

SURFACE	WHO IT SERVES	WHAT IT DOES
Website and landing pages Phase 1	Parents arriving from ads and search	Turns paid and organic traffic into structured enquiries and completed registrations
Parent and student portal Phase 2, first	Families	Attendance, schedule, fees, tutor feedback and materials, in plain Malay with no password
Admin portal Phase 2	Owner and office staff	Students, tutors, cohorts, schedule, syllabus, billing and payroll
Tutor portal Phase 3	Educators	Daily classes, lesson plans, earnings and payslips

THE IDEA UNDERNEATH ALL OF IT

One class recorded, every number agrees

A tutor teaches on Zoom. The join log says the session ran 1.5 hours. That number flows into the tutor's payslip, the payroll run, the cost-per-tutor view and the margin on your dashboard. It is calculated once and read four times, so the figures cannot disagree.

The working prototype. Every screen in this proposal is a real, clickable page, not a mockup.

The growth engine

Everything in phase 1 exists to answer one question: where does the next student come from?

The website, six pages

Home	What Hz is now, and who it is for
Subjects	Organised by KPM stage, from Tahun 1 to SPM
How it works	How an online class runs. This answers the biggest objection
Our tutors	Faces, names, subjects, experience. Trust lives here
Fees	Stated plainly. Hiding pricing loses more enquiries than it protects
Contact	WhatsApp first, form second

The landing page system

A website and a landing page do opposite jobs, so we build them separately. The website has navigation and lets a parent explore. A campaign page has none, because its only job is to convert one ad without offering an exit.

- One template: hero, proof, how it works, the offer, objections, call to action
- Three campaign pages built with you, so the pattern is clear
- A written one-page guide, in Malay, on adding the fourth
- A naming convention that keeps the ad platform and your enquiry list in agreement

Landing page, Bahasa Melayu first and fully mobile responsive.

Registration in five short steps, so every enquiry arrives complete.

WHY WE RECOMMEND STARTING HERE

Phase 1 pays for itself with three students

At roughly RM 240 a month, one retained student is RM 2,880 over a year. Three cover the entire phase.

RM 1,000 OF ADS	ENROLLED	MONTHLY REVENUE
Typical	~13	RM 3,120
Pessimistic	~6	RM 1,440

Industry benchmarks for Malaysian education, not a promise. The largest single factor is how quickly Hz replies to a WhatsApp enquiry. Under fifteen minutes moves conversion more than any design decision we could make.

Knowing which ad produced which student

You asked about Meta Pixel specifically. Here is what we install, what it will tell you, and honestly, what it will not tell you until phase 2.

Two halves of one system

The **Meta Pixel** is a small piece of code on your site that reports what visitors do. On its own it now loses a large share of events, because iPhone privacy settings, browser protections and ad blockers all interfere with it. So we also run the **Conversions API**, which reports the same events from the server instead of the browser. Both carry the same event identifier, so Meta counts each action once, and the ones the browser loses still arrive.

This is Meta's own recommendation, not a workaround, and for a centre whose growth depends on paid traffic it is core infrastructure rather than a marketing extra.

What gets measured

EVENT	WHEN IT FIRES	WHERE FROM
Page view	Every page a visitor opens	Browser
View content	A subject page or a campaign page is read	Browser
Contact	The WhatsApp button is tapped	Browser
Lead	An enquiry form is submitted	Browser and server
Registration submitted	The full registration is completed	Browser and server

What phase 1 will tell you

- Which ad and which campaign produced each enquiry
- What an enquiry costs you, per campaign
- Which subject and which level parents actually respond to
- Which campaign pages convert, and which should be retired

What it cannot tell you yet

Which ad produced a student who actually **paid**. Closing that loop needs the WhatsApp Business connection and online payment, and both are phase 2. We are telling you this now so it reads as a planned boundary rather than a disappointment in three months.

Until then, optimise your ad spend on enquiries, which phase 1 measures accurately, and judge enrolment by hand from the enquiry list.

On **"website API integration"**. You raised this and we would rather scope it properly than guess. It usually means one of five things: enquiries writing into the system, pulling your data out of Mudeer, online payment, automatic WhatsApp messages, or the site showing live class data. Four of those are phase 2 work and one is a migration. We will walk through the list with you and price only what you actually need.

Closing the gate

Right now a class link is a message in a WhatsApp group. Whoever has it can attend, whether they are enrolled or not, whether they have paid or not. This section is how that changes.

One rule makes all four of your requirements work

The join link stops being something Hz sends and becomes something the system issues, to one named student, for one session, only if their account is active and paid. Everything else follows from that single change.

Four layers, and one honest limitation

- **The link leaves WhatsApp.** The group message says class starts in 30 minutes and links to the portal. The Zoom address is never in a chat again.
- **Only paid students are registered.** The system creates the Zoom registration per student. No registration means no link exists to share.
- **Sign-in required.** Zoom can require the person to be signed in as the invited student, so a forwarded link does not work on its own.
- **Every class is reconciled.** After each session we compare who actually joined against who was enrolled, and unknown participants appear on an admin screen within the hour.

What we will not claim

Zoom does not bind a link to a person or a device. If a determined student forwards a link and the recipient can sign in as them, both get in. There is no setting that prevents this, and any vendor who tells you otherwise has not read the documentation.

What we can promise is different and more useful: sharing becomes difficult, traceable and, for the first time, counted. You will know each week how many unknown participants attended and which cohorts leak.

The sign-in layer is the strongest lock and it carries a cost: every student needs a Zoom account and must stay signed in, which is real friction on a shared family phone. We recommend piloting it on two cohorts before deciding whether to apply it everywhere. That is a decision for Hz, and we will show you the numbers from the pilot before you make it.

Getting paid, without chasing seven hundred people

Monthly collection from 700 families is not an admin task, it is a full-time job. It should be a background process that only surfaces the exceptions.

How the money actually moves

Malaysian online banking transfers cannot repeat themselves, so a link sent every month still needs a parent to act. The rail that does work is **direct debit by eMandate**: the parent authorises once through their own online banking, confirming with a RM 1 verification, and after that the fee is collected automatically each month from 22 participating banks.

We set this up with a Malaysian provider, with a card option for parents whose bank is not supported, and a simple payment link for the handful who prefer to pay manually. Every ringgit lands against a named student with a receipt, automatically.

What Hz sees

- Who has paid, who has not, and for how long, on one screen
- Failed payments flagged the day they fail, with the reason
- Every reminder timestamped, so two staff never chase the same parent

The reminder ladder

Automatic, escalating, and every step is a setting Hz controls.

7 days before	Invoice issued, WhatsApp notice to the parent
Due date	Direct debit collects automatically
Day 1 to 3	Automatic retries if the bank declines, parent notified
Day 7	Reminder with a payment link
Day 14	Final notice, warning that access will pause
Day 21	Account suspends. No registration, no join link

Suspension, done humanely

- The parent always sees it coming, in the portal and by message
- Paying at 2pm puts the student back in the 4pm class, in one click
- Hz can override for a hardship case, and we log who and why
- One grace class after suspension, with a visible notice. It converts better than a locked door and protects you from a parent whose bank was simply slow

A note on cost. Collecting 700 payments a month carries real provider fees, roughly RM1,500 to 3,000 depending on the mix of rails. That is Hz's cost, not ours, and it is listed with the other running costs later in this document rather than hidden.

We build for the parents before the office

You told us the hard part is the parent and student side, because they are not comfortable with technology. We agree, and we have reordered the build around it.

One child, one screen, plain Malay.

Three questions, and nothing else in the way

- Did my child attend, and what class is next?
- How are they doing?
- Do I owe money?

Plus the announcements that currently scroll past in a group chat: centre notices, cohort notices, class changes and materials, each one kept in the place a parent can find it again. Online quizzes join this screen after phase 2, scoped and priced separately because a quiz engine is a product in its own right.

No password. No app store.

Hz sends a WhatsApp message. The parent taps the link inside it and lands on their child's page, already signed in. That is the entire login, and it is the single most important decision in this whole design.

Why WhatsApp, and not a notification app

The obvious answer is to build an app that sends push notifications. We looked at it properly, and for Malaysian parents the numbers do not support it.

~91%

of Malaysian internet users are on WhatsApp. It is already open on the phone of every parent you serve.

~10%

is the realistic reach of web push notifications, once you account for iPhones needing an install first and typical opt-in rates.

40%

of Malaysian mobile phones are iPhones, and those are precisely the ones where push notifications are hardest to deliver.

So the portal is built as a web app that installs to the home screen if a parent wants it, but the messages themselves travel by WhatsApp. One channel does two jobs: it is the notification, and it carries the link that logs them in. For a parent who has never used a portal before, that is the difference between a system they use and a system they ignore.

The office, without the spreadsheet war

Your team are good at Excel. We are not going to insult that by pretending a web form is faster than a keyboard, because it is not.

Where a system genuinely wins

- **Fee reminders that send themselves.** Nobody has to remember who has not paid.
- **Payroll derived from real sessions.** No month-end tallying and no disputes, because the tutor and the office read the same number.
- **A view the parent can see.** A spreadsheet can never do this, and for an online centre it is the whole game.
- **One version, always.** No more three files with three different totals.

Your Excel file is the migration path

We import it rather than asking you to retype it, and you can export back out at any time, in any month, without asking us. We also run **one full billing cycle in parallel** with your current system before anything is switched off, so there is no moment where Hz is trusting something unproven with real money.

Students / Pelajar

202 pengira dan mahasiswa untuk kategori

PELAJAR	BARUK	COHORT	SUBJEK	PEMBAYARAN	BAYARAN
Adam Hafiq	Tahun 4	Kota Warisan	Mat	Mat	Mat
Nur Izzah	Tingkatan 2	Kajang	Mat	Mat	Pending
Wong Yi Lin	Tahun 4	Iskandar	Mat	Mat	Mat
Dina Samah	Tingkatan 5	Petaling	Mat	Mat	Overdue
Adam Farah	Tingkatan 1	Kota Warisan	Mat	Mat	Pending
Safura Huda	Tahun 3	Kajang	Mat	Mat	Mat
Tan Wei Lin	Tingkatan 4	Iskandar	Mat	Mat	Mat
Haris Dharif	Tahun 4	Petaling	Mat	Mat	Pending

Every student, with guardian, cohort, subjects and payment status in one place.

Fees with proof of payment attached, ready for FPX and DuitNow collection.

THE NINE MODULES

WHAT EACH ONE IS FOR

Dashboard

Enquiries, active students, classes today, outstanding fees, margin

Students and guardians

One search, one screen, a complete answer about any child

Educators

The tutor roster, wired directly to payroll

Schedule and lesson plans

The timetable, out of one person's head and onto one screen

Syllabus bank

A KPM-aligned reference so teaching stays consistent

Billing and fees

Invoices, receipts, and online collection through FPX and DuitNow

Tutor payroll

Generated from recorded sessions, never typed by hand

Cohorts

Class groups, replacing branches now that Hz is online

Settings and integrations

Zoom, WhatsApp, centre identity, staff access

The tutor portal can wait, and that saves you money

This is the one place in the proposal where we are removing scope rather than adding it.

In the original plan, the tutor portal was necessary. Tutors had to mark attendance for the office to know a class had happened, and payroll depended on those marks.

Teaching on Zoom removes that dependency entirely. The join log already knows exactly how long every tutor taught, so payroll can be produced accurately whether or not a single tutor ever logs in. That makes phase 3 a genuine add-on: valuable, but optional, and safely deferred until Hz wants it.

Tutor earnings, already built and ready when Hz wants it.

38 hours × RM 45

RM 1,710

Calculated once from the meeting itself, then read by the payslip, the payroll run and the cost-per-tutor view. The numbers cannot disagree because there is only one of them.

What Hz gains by adding it later

- Tutors see their own schedule without messaging the office
- Lesson plans kept against the KPM syllabus
- Transparent earnings, which is what keeps good tutors from leaving

What we will never build

- Video conferencing. Zoom is better at it than we will ever be.
- A payment gateway. We integrate Billplz for FPX and DuitNow.
- A messaging network. We use the official WhatsApp Business platform.

What we do build

- Everything around those services, so they behave like one product
- The data model that keeps every number consistent
- The interfaces your parents, staff and tutors actually touch

Where AI earns its place, and where it does not

Most AI in education software is decoration. We would rather tell you the two places it removes real work than add a chat bubble and call the product modern.

Answering enquiries instantly, at any hour

The single biggest factor in whether an enquiry becomes a student is how fast someone replies. At Hz's volume, and at nine at night, a person cannot. An assistant answers the predictable questions, subjects, levels, fees, how an online class works, and hands to your team the moment a parent asks something specific.

It never negotiates price and never promises a place. It is visibly labelled, with a human one tap away.

A monthly note to every parent

"How is my child doing" is the question the parent portal exists to answer, and the one nobody can answer 700 times a month by hand. From attendance, topics covered and tutor comments, the system drafts a short note in plain Malay for each child.

The tutor reviews and approves before it sends. We will not send unreviewed machine-written text about a child to their parent.

Also worth building, once the foundation is there

- Ranking the overdue list by who is most likely to pay, so chasing becomes twelve calls instead of an afternoon
- Drafting KPM-aligned quiz questions for tutors to review, once the quiz platform exists
- Spotting unusual attendance patterns that suggest an account is being shared

And what we will not build

A chatbot that teaches students. Hz sells lessons from named human tutors, and a machine that answers homework questions competes with the thing parents are paying for. Parents will notice before you do.

We would also avoid anything that analyses class video or audio. The privacy exposure around minors is not worth the feature.

None of this is in phase 1 or the core of phase 2. It is listed so you know the platform is built to accept it, and so that when a competitor announces an AI feature you already know which parts of it are real.

Production technology, not an experiment

The prototype you have already clicked through is built on the same technology the live system will run on. Nothing is thrown away, and nothing is built twice.

What it is built with

Interface	Vue and Nuxt with TypeScript
Backend	Laravel and MySQL, from phase 2
Hosting	Cloudflare, with automatic backups
Payments	Billplz for FPX and DuitNow
Classes	Zoom, integrated for join logs and recordings
Messaging	Official WhatsApp Business platform

Why this matters to Hz

Most agencies show a design file and build the real thing later, which is when the design quietly changes and the timeline slips. We built the interface first, in production technology, which is why you can click through the whole system before signing anything.

The screen you approve is the screen you get. Hz is not buying a promise: the hardest part, the design and the interaction, already exists and can be inspected today.

Your data, plainly stated

Who owns the student data	Hz Academy, entirely. Student, guardian and operational data is yours.
Can you take it out	Yes, at any time, in a standard spreadsheet format, without asking us first.
Who owns the software	Axel Nova Ventures, unless Hz takes Route C. Hz receives a full licence to use it, which is what makes the Founding Partner rates possible.
Where it is hosted	Cloudflare, with regular automated backups.
Payment data	Handled by a licensed Malaysian payment provider. We never store card or banking credentials.

On LHDN e-Invoice

The exemption floor is RM 1,000,000 of annual turnover. At 700 students, Hz is comfortably above it, which places you in **Phase 4 of the mandate, in force since 1 January 2026**, with the penalty-free relaxation running to 31 December 2027 and enforcement from 1 January 2028.

This is a deadline, not an option. Phase 2 captures the buyer details an e-Invoice needs at registration and issues consolidated monthly e-Invoices for parents, which is what the rules allow for consumer billing. **Please confirm your annual turnover.**

Three ways to work together

The same platform, bought three different ways. We think most centres are best served by the first, and we will show you the numbers rather than just say so.

Route A

Recommended

Platform subscription

The platform as a service

RM 2.00 per active student, per month

About **RM 1,400 a month** at your current size, plus a **RM 15,000** launch fee covering the phase 1 build, onboarding, data migration and configuration. Minimum RM 600 a month.

Founding Partner rate, locked for 36 months.
Published rate from centre two onward: RM 3.50 per student, RM 24,000 launch.

Included, with no further build fees

- ✓ All three phases, delivered on the roadmap
- ✓ Hosting, security, monitoring and daily backups
- ✓ Maintenance and every future platform feature
- ✓ Priority WhatsApp support
- ✓ Your data exportable at any time

Choose this if you would rather protect cash than own an asset, and you want the fee to follow the size of the centre.

Route B

Phased ownership

Pay once, phase by phase, under licence

Phase 1 · Website and landing pages RM 6,000 – 8,000

Phase 2 · Access, payments, parent and admin RM 22,000 – 29,000

Phase 3 · Tutor portal RM 5,000 – 6,500

Total RM 33,000 – 43,500

Unchanged from July. Fifty percent to begin, fifty on delivery. Hz may stop after any phase and keeps everything delivered.

What ownership does and does not buy

- ✓ A perpetual licence to keep running the phases delivered
- ✓ The system exactly as specified and approved
- Hosting, support and maintenance, at RM 1.20 per student a month, about **RM 840** at your size
- Future platform features built after your phases ship

Choose this if Hz prefers a capital purchase, and wants the system fixed and predictable rather than evolving.

Route C

Full ownership, including the intellectual property

All three phases, the source code, and assignment of the platform itself. Our right to develop this system for any other tuition centre ends on final payment.

RM 120,000

Not a discounted build. It is the build at market rate plus the product we give up, which is why every other route here costs a fraction of it. Hosting quoted separately.

What it costs, against what it recovers

Two comparisons matter: what Hz spends on software today, and what Hz loses to free riders today. The second is the larger number.

CUMULATIVE COST TO HZ	YEAR 1	3 YEARS	5 YEARS
Staying as you are Current system at 700 students, roughly RM 2,100 a month, before transaction fees	RM 25,200	RM 75,600	RM 126,000
Route A · Subscription RM 15,000 launch, then RM 1,400 a month at 700 students	RM 31,800	RM 65,400	RM 99,000
Route B · Ownership, low end RM 33,000 build, then RM 840 a month	RM 43,080	RM 63,240	RM 83,400
Route B · Ownership, high end RM 43,500 build, then RM 840 a month	RM 53,580	RM 73,740	RM 93,900

Subscription costs more in year one and less every year after, overtaking your current spending at around month 21. Ownership costs more early and less late, which is the normal shape of buying versus renting.

THE COMPARISON THAT ACTUALLY DECIDES IT

The platform costs less than the leak it closes

Route A costs Hz about **RM 16,800 a year** at your current size. If just two percent of your students are attending without paying, closing that gate returns **two and a half times** the entire annual cost of the system. At five percent it returns six times.

FREE RIDERS

2%, 14 students

5%, 35 students

Cost of Route A

RECOVERED PER YEAR

RM 40,320

RM 100,800

RM 16,800

Moving between routes

You are not locked into the shape you pick. Ownership converts to subscription with no new launch fee. Subscription converts to ownership, with the launch fee and half of everything paid in the first 24 months counting toward the purchase price.

And the market rate, for reference

An equivalent custom build from a Malaysian agency runs **RM 83,000 to 190,000** for this scope. That is why Route C is priced where it is, and it is the gap the Founding Partner arrangement covers.

The Founding Partner arrangement

Hz is the first centre this platform is being built with. Not the first it is sold to, the first it is built *with*. That distinction is the arrangement, so here it is precisely.

What Hz Academy receives

A named rate, not a vague discount **RM 46,800**
 RM 2.00 per student against a published RM 3.50. Launch fee RM 15,000 against RM 24,000. **saved over 36 months**

A 36-month rate lock **36 months**
 Then Hz renews at the published rate less a permanent 25 percent founding discount.

Roadmap priority, with a mechanism **8 features**
 Two features nominated each quarter for the first four quarters, ahead of general roadmap work.

A perpetual licence **Permanent**
 Hz keeps operating everything delivered, whatever happens to Axel Nova.

Your data, always **On demand**
 Standard format, on demand, no notice period, no fee.

A refundable start **30 days**
 The launch fee is refundable within 30 days if Hz is not satisfied.

What Axel Nova receives

- Real operational feedback from a working centre
- A named case study and logo use, once you are genuinely happy
- Up to four reference calls a year
- The right to develop the platform for other centres

Why the rate exists

The software remains the property of Axel Nova Ventures, and we will develop it for other tuition centres. Hz receives a full licence covering its entire operation.

That is the trade. Because we keep the platform, Hz pays a fraction of a bespoke build. Route C, at RM 120,000, is what it costs when we do not.

NEW, AND UNIQUE TO THE FOUNDING PARTNER

Hz earns from every centre it introduces

Introduce another tuition centre. If they sign, Hz receives **20 percent of that centre's first year** as credit against its own monthly fee. A 300-student centre at the published rate is **RM 2,520 of credit**, and roughly **seven introductions would cover a whole year** of Hz's own platform fee.

Credits roll forward twelve months and can reduce the monthly fee to zero. Credit against fees, not a cash payment.

And one thing we are not offering, deliberately

Exclusivity. We will not promise that no other centre can use this platform, and Hz should not want us to. A product used by one centre stops improving, and Hz now teaches nationally, so territory is worth nothing anyway. What Hz gets instead is a permanent head start, a rate no later centre will be offered, and a share in the platform's growth.

What it costs to run, stated up front

These sit outside the build price and the subscription, because they are services Hz buys directly and we pass through at cost. At 700 students some of them are larger than the platform fee, and you should see that now rather than in month three.

RUNNING COST	FROM	ESTIMATED MONTHLY
Zoom licences Driven by how many classes run at the same moment, not by how many tutors you have. Education pricing needs a 20–licence minimum.	Now	RM1,700 – 4,200
Payment collection fees 700 collections a month across direct debit, card and payment link. Direct debit rates are quoted per merchant, so this needs confirming with the provider.	Phase 2	RM1,500 – 3,000
WhatsApp messages Charged by Meta per message. Class reminders and fee notices are the drivers. Replies inside an open conversation are free.	Phase 2	~RM280
Advertising spend Hz decides the budget. Phase 1 does nothing without some.	Phase 1	Your choice
Domain and hosting Included in Route A.	Phase 1	Near zero

Two questions we need answered to firm these up

What does Hz pay Zoom today, and on what plan? If classes are running on free accounts with a forty-minute limit, that explains how the WhatsApp link habit started, and the licence cost above is new money rather than money you already spend.

How many classes run at the same time at your busiest hour? One licensed host runs one meeting at a time. A hundred tutors does not mean a hundred licences, peak concurrency does, and it is the difference between the two ends of that range.

WORTH KNOWING

Government grant assistance

The **MSME Digital Grant MADANI** provides eligible Malaysian small businesses with a fifty percent matching grant of up to **RM 5,000** toward digitalisation. It can only be claimed through a technology provider registered with MDEC, and **Axel Nova Ventures is pursuing that registration.**

If it comes through

It would take a third off the launch fee, or cover most of phase 1 outright. We will confirm before you commit and will not build it into the pricing until it is certain. Allocations are limited and terms change.

How this runs, and what we need from you

Every phase ends with something Hz is actually using. We do not disappear for six months and reappear with a launch.

Phase 1 Website and landing pages

Weeks 1 to 5

Content gathering and structure, then the website, then the campaign template and three campaign pages, then tracking and handover. Hz ends this phase able to run its own campaigns and see what each enquiry costs.

Phase 2 Parent portal, then admin

Roughly 3 to 4 months

Backend and data migration first, then payment collection and the gated Zoom access, because that is where the money is. The parent portal is built around them, and the admin screens follow. One full billing cycle runs in parallel with your current system before anything is switched off.

Phase 3 Tutor portal

When Hz is ready

Optional, and deliberately last. Nothing depends on it.

What we need from Hz to start

Content is the usual reason a launch slips, so we would rather ask for all of it before we begin than chase it midway.

- Tutor photos, names, subjects and qualifications
- Four to six parent testimonials, with permission to publish
- The confirmed fee structure for online classes
- The WhatsApp number that will receive enquiries
- Access to your Meta business account, or permission to create one
- Confirmation of whether a free trial class will be offered
- Logo files and confirmation the brand stays Hz Academy

What we still need to agree

- Your exact active student count and tutor headcount, which size most of this document
- Your annual turnover, which decides whether LHDN e-Invoice applies now
- How many classes run at the same time at your busiest hour
- What "website API integration" should mean in practice
- Whether Axel Nova or Hz writes the copy for each campaign
- Who holds the advertising budget and the ad account
- How much data sits in your current system, and whether it exports cleanly
- Your plan for the local students affected by moving fully online

NEXT STEPS

Three steps, and none of them are large

1 A walkthrough, together

We run the working prototype with you and your team, clicking through every screen in this document. Bring your hardest questions, and bring whoever will actually use it.

2 Choose a route and start phase 1

Subscription or ownership. Either way phase 1 is the first thing built, and it is a small enough commitment that you do not have to decide the whole relationship today.

3 Review the real numbers, then decide phase 2

Once phase 1 has been running, you will know what an enquiry actually costs Hz. Decide phase 2 on that evidence rather than on this document.

Hz Academy has been earning trust since 2014. That reputation was built in classrooms, and it now has to survive without them. This platform is how the systems catch up with the reputation: a front door that brings families in, a portal that shows them their child is learning, and an office that runs on one set of numbers.

We would be honoured to build it with you, as a founding partner rather than a client.

Axel Nova Ventures

axelnova.tech · Simple, effortless, human.

Prepared for Pusat Tuisyen Hz Academy · August 2026
Pricing valid for 30 days. Full terms in a separate agreement.
